

'93-02 Camaro Front Coil-Over Conversion

Converting your stock 1993-2002 Camaro front suspension to VariShock coil-over shocks is a simple bolt-on procedure. Our exclusive factory-welded upper-mount assembly bolts to the factory tower, replacing the factory mount. The urethane-bushed lower crossbar mounts directly to the factory or aftermarket lower A-arm. Lightweight billet-aluminum VariShock coil-overs are available in 16-position single-adjustable or 256-combination double-adjustable versions and provide 4.25" of shock travel. Choice of spring rates range from 350 to 450 lb/in, suitable for drag-race use, street-friendly ride quality, or handling performance. A second set of different rate springs can also be selected as an option for tuning purposes. Kits include shocks, springs, mounting hardware, and spanner wrench. All shock components and hardware are plated, anodized, or powder coated for a long-lasting quality appearance. Shocks and springs are packaged in pairs.
